

Submission from Harold Turnbull in regard to the Solar Fair Price Inquiry:

I like many others of being blatantly am very disappointed with the Solar Industry and the Government for the sham that the consumer will only pay for extra power required which the solar panels not generating enough electricity. and will be paid a rebate for excess power produced. NO TRUE.. I invested \$5000 to have the solar panels of 5kw. REALITY I am being charged 22+ cents for the power used for my house, when I have produce 100% of the product. Why would any person produce a product for somebody else to sell it back to you for 22+ cents per kw and be paid a lousy 6 cents per kw rebate. The ROI is a ridiculous 15/16 years????? I would prefer to return to my pre solar days so I look forward to your anticipated reply, otherwise you please advise me of the requirements to return to pre solar days as I am not prepared to be RIPPED OFF. If you surveyed the general public re your payment system you would be shocked with the result
