TO WHOM IT MAY CONCERN

Solar Feed in.

I have a 1.5kv solar system on my roof. When the system was installed the meter was part of the cost. Now somebody wishes to charge me 6.767 cents per day maintenance.

So I suppose the next charge is to maintain the other two meter readings on that meter.

I object totally to this charge as it is in the end result an extra (round figures) \$25 a year.

Electricity already costs too much as it is.

Now I feel the net result is that somebody wants to make money from my wisdom in fitting a solar system. Not likely.

I have yet to recoup the \$300 deposit from my solar system without any other considerations. The net result of the charge I get of 6.767 cents is I do not even get that amount from power to cover it.
