25.2.2016

Dear Sir/Madam

This has to do with electricity prices. Since 2012 the supply charge has increased massively from 28.7 c/day to 116.4 c/day while the consumption charge has fallen minimally in the same time period. As a result there has been a big increase in my power bill, as I am a low energy user. If the supply charge increase continues at the present rate pretty soon electricity will become unaffordable ~~for~~ for those on fixed incomes and struggling to make ends meet. Can you not do something to reduce the supply charge without ~~increasing~~ increasing the consumption charge?

Thanks

Yours Sincerely

Dick Wendworth
